SUMMARY

Information Technology graduate (CGPA 9.44 / 10) with production-level experience in AI/ML, full-stack development, and backend engineering. Designed and deployed computer vision pipelines, ERP systems, and AI-driven automation workflows used in real-world business environments. Adept across the full delivery lifecycle - from model training and API development to VPS deployment and Flutter-based mobile interfaces. Seeking roles in Software Engineering or AI Engineering

EDUCATION

Bachelor of Engineering in Information Technology

Gujarat Technological University, India

2022-2026

CGPA : 9.44

Hons. Degree in Data Science

Gujarat Technological University, India

2024-2026

GRADE : AB

EXPERIENCE

Freelancing - Self-Employed

Project: Jewellery And Diamond E-Commerce Website

ReactJS, Python, FastAPI, SQL, Online APIs (Live Gold Rate API, Live Currency Rate API)

> Building a jewellery showcase platform with product listings, customer inquiry workflows, and admin inventory management for multi-user stock control.

> Integrated live gold rate and currency conversion APIs with automated periodic refresh to keep pricing data current.

> Deployed via VPS server and did professional SEO as well with CI/CD pipeline

May 2026 - Present

Project: DIAMO (Diamond Trading ERP Software)

ReactJS, ElectronJS, NodeJS, MySQL

> Delivered a fully offline-capable ERP for diamond trading businesses covering inventory, transactions, ledger management, payments, and reporting.

> Implemented carat-based stock management with real-time tracking across multiple diamond varieties and automated overdue/brokerage calculations.

> Built analytics dashboards with stock distribution, profit analysis, and transaction visualisations to support business decision-making.

AI / ML + SDE Intern - Upnext Software Private Limited

PackVision AI

Python, Deep Learning, Computer Vision, TensorFlow, TFLite, YOLO, Google ML Kit (OCR and Document Detection), Dart, Flutter

> Architected an end-to-end pharmaceutical packaging inspection system using computer vision, reducing manual QC effort on the production line.

> Engineered a dual-stream defect detection pipeline (EfficientNetV2B2 + custom CNN) for fine-grained anomaly classification of medicine packaging.

> Designed an autoencoder-based anomaly detector using SSIM and VGG perceptual loss, enabling high-precision reconstruction-based inspection.

> Trained and deployed YOLO object detection models for bottle localisation and seal integrity verification within a 360° mobile scanning workflow.

> Built the full-stack delivery layer: Flutter scanning app, Python/FastAPI inference backend, and ReactJS admin dashboard for managing AI workflows and inspection results.

> Integrated TFLite model inference pipelines for on-device prediction, reducing server round-trips and improving real-time response.

January 2026 - April 2026

AI Intern - Nerdshouse Technologies LLP, Surat.

WhatsApp-based AI Appointment Scheduler

n8n, OpenAI API, WhatsApp Cloud API, Google Calendar API

> Led development of a WhatsApp-based AI appointment scheduling system deployed in live business workflows.

> Designed multi-step automation pipelines in n8n, integrating OpenAI, WhatsApp Cloud API, and Google Calendar API for intelligent meeting scheduling and reminders.

> Hardened workflows against edge cases: overlapping bookings, missing user inputs, and third-party API failures.

> Authored system architecture documentation and deployment runbooks, enabling team knowledge transfer and future scalability.

July 2025 - July 2025

PERSONAL PROJECTS

Copy-Move Forgery Image Detection

Python, CNN, OpenCV, MICC, CASIA

> Developed a CNN-based system to detect image forgeries by identifying duplicated regions.

> Trained and evaluated the model using MICC and CASIA benchmark datasets.

> Achieved **97.64% accuracy** through effective image preprocessing and feature extraction techniques.

Impact Of AI On Jobs - 2030: Interactive Data Analytics Dashboard

Python, FastAPI, Pandas, NumPy, Chart.js

> Developed a **full-stack interactive dashboard** to analyse the impact of AI on 20 professions using 3,000+ data points and real-time visualisations. (Kaggle Dataset)

> Built backend analysis modules using Pandas and NumPy to perform statistical computations, including automation risk, salary trends, and AI exposure correlations.

> Implemented interactive **data visualisations** using Chart.js, including bar, scatter, and risk distribution charts for intuitive insights.

Customer Segmentation using K-Means Clustering

Python, Pandas, NumPy, Scikit-learn, Matplotlib

> Performed exploratory data analysis to analyse customer spending patterns.

> Applied MinMax scaling and the Elbow Method to determine the optimal number of clusters.

> Segmented customers into **5 distinct customer groups** to support data-driven marketing strategies.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript

AI & Machine Learning: Deep Learning, Computer Vision, CNN, Autoencoders, YOLO, TensorFlow/Keras, OpenCV, Scikit-learn, TFLite, Model Inference Pipelines

Backend & APIs: FastAPI, REST APIs, OpenAI API, Google Calendar API, Google Sheets API, WhatsApp Cloud API

Frontend Development: HTML, CSS, JavaScript, React

AI Automation: n8n Workflow Automation, AI Agent Development, WhatsApp-based AI Systems

Databases: SQL

DevOps / Deployment: Nginx, Linux Server Management, VPS Deployment, Hostinger VPS, API Deployment & Model Hosting

Tools & Platforms: VS Code, Cursor, Android Studio, Git (GitHub, GitLab)

Operating Systems: macOS, Windows, Linux

Achievements

2nd Winner: National-level technical festival Hackathon

3rd Winner: College-level Web Development competition

Certification Courses

Google: 1) Google Cloud computing Foundations: Data, ML, and AI in Google cloud, 2) Google cloud the arcade

Infosys Springboard: 1) Basic Python, 2) Data Science with Python, 3) Introduction to Data Mining, 4) Advanced Statistics and Data Mining for Data Science

Forage: Deloitte Australia - Data Analytics Job Simulation
